PromoJET INKJET FOR EDIBLE PRODUCTS

The PromoJET inkjet system is an extremely versatile decorating machine for flat or 3-dimensional items up to 5 inches high. This inkjet uses edible inks to print high quality images on candy and bakery products such as mints, lollipops, chocolate, cookies, cakes and more. All components of the PromoJET edible inks are FDA approved.

This inkjet system is ideal for any graphic printed on a light colored or white substrate and offers incredible benefits when running four-color process, gradients or multi-color printing jobs. With this direct-to-part system, just print the digital file to the inkjet – and within minutes your products are decorated with crisp graphics.

The PromoJET can also be changed over to standard solvent-based inks within a few hours. The standard inks allow decoration of promotional products and gifts like plastic and metal pens, lapel pins, golf balls, CDs, plaques, mint tins, credit cards and a wide range of other items.

The PromoJET features a DC driven tooling table (13" x 26"), onto which parts can be tooled easily for multi-part decoration. Specialized RIP software controls the color reproduction and the overall amount of ink laid on the product.

STANDARD FEATURES

- 13" x 26" tooling platform*
- 5" vertical height adjust*
