

Harmony Ink and Thinner Dispenser from Inkcups Now Corporation

Inkcups Now Corp. has introduced the Harmony Ink Dispenser, a 12 or 16 canister system designed to store and accurately dispense printing inks and thinners, drastically simplifying ink mixing and PMS color matching. This compact tabletop dispenser enables you to quickly mix the precise amount of PMS colors that you need at the moment, eliminating ink waste while saving time and money.

The Dispenser's hermetically sealable and solvent resistant canisters hold up to 2.5 liters of ink or thinner. The 12 canister model can accommodate a twelve color mixing system; the 16 canister model allows adding a combination of thinners or opaque colors. The Dispenser has two graduated pumps, for coarse and fine control over the ink, which allows dispensing at 0.1 gram accuracy. The easily removable nozzles are designed to minimize dripping. The automatic mixing feature helps keep the ink at the correct viscosity.
