

ICN-2200C Carousel Pad Printer from Inkcups Now Corporation

Inkcups Now has introduced a carousel-equipped two color sealed cup pad printer, ICN-2200C. The eight station carousel part transport system includes a precision shot-pinned (positive lock) tooling registration feature that ensures close tolerance part positioning. Additional pad printing equipment includes a point tool mount configuration that reduces typical fixture costs and facilitates rapid change-over of tooling. These pad printing features, coupled with XYR micro-adjust plate holder assemblies and tool-less quick adjust pad mounts, promote rapid setup and reduced printing costs. The printer's membrane touch control makes it simple to program such features as pad stroke, pad delay, ink mixing, ink pick up frequency and part index. Ample compression capability allows using large and hard printing pads.

"ICN-2200C is a reliable conveyor pad printer that is also user-friendly and cost effective," comments Mike Bissel, VP at Inkcups Now. "And as all ICN equipment, it comes with unlimited no-charge technical support from our team of printing experts. These are quality machines and we stand behind them."
