

ICN-2200L Automatic Pad Printer with Linear Conveyor

Inkcups Now has recently introduced a two color automatic pad printing machine with a linear conveyor. The linear conveyor can compliment up to 18 parts in one cycle and features a shot pin print station registration for very tight registration and has a micro-adjust system for moving the conveyor in and out for easy positioning of the graphic on your part. The linear conveyor allows for automatic loading and unloading of parts, which is excellent for production companies with high volumes. These features, coupled with XYR micro-adjust plate holder assemblies and tool-less quick adjust pad mounts, further reduce production time and increase productivity. ICN-2200L automatic pad printer has ample compression capability and is able to accommodate large, hard print pads - making it one of the most versatile, capable and cost effective two-color pad printers available on the market today. "And as all ICN equipment, it comes with unlimited no-charge technical support from our team of printing experts. These are quality machines and we stand behind them." Comments Mike Bissel, VP at Inkcups Now.
