

### **ICN-2506 Six Color Pad Print Machine from Inkcups Now Corporation**

Inkcups Now has recently introduced the ICN-2506, a semiautomatic six color sealed cup pad printer with a precision servo controlled indexing shuttle table. This pad printer features XYR micro-adjust plate holder assemblies, programmable shuttle table ( $\pm .001$ " ) and quick-release locking handles on pad and cup assemblies. As all ICN pad printers, it comes with the patented VersaCup ink cup assembly and a two-sided ceramic ring. Machine setup can be accomplished without the use of any tools. Membrane touch control makes it simple to program the pad stroke, pad delay and shuttle location.

"This is a very durable and user-friendly machine," says Mike Bissel, Inkcups Now Vice President and chief equipment specialist. "It has a smooth print cycle and handles a wide variety of printing pads, including large and hard ones. In my opinion, the ICN-2506 is one of the most versatile and cost effective of the multi-color pad printers on the market."
