

Inkcups Now is US dealer for Mimaki UV Inkjet Printers

Inkcups Now Corporation has become one of three US distributors for Mimaki Engineering Co., LTD. The express purpose of the agreement is to sell and service Mimaki's line of UV Flatbed Inkjet Printers to the US Promotional Products industry.

Several Mimaki UJF-605CII machines have already been installed in Promotional Product marketplace, proving this inkjet to be a great alternative to pad or screen printing for multicolor, tight registration printing on flat and non-uniform items. Among possible applications is the decoration of golf balls, POP displays, membrane switches, name plates and more.

The high-end UJF-605CII Flatbed Inkjet prints in 8 colors; standard and flexible inks are available. High density white ink enables first and second surface printing over clear or transparent products like PET, PC, OPP, PVC, polyethylene, polycarbonate and acrylic. Very small 6 picoliter droplets, variable dot size and high 1200x2400 dpi resolution ensures smooth tonal images and crisp edges without the grainy pattern associated with other UV Flatbed printers.
