

ICN-M15 FP Flatbed Screen Printer from Inkcups Now Corporation

Inkcups Now has introduced ICN-M15 FP – a flatbed screen printing machine designed for easy decoration of nameplates, promotional products, panels, signs and other items up to 5” high.

The printer features simple setup and operation. It is equipped with 4 way micro-adjust screen clamp system, micro-adjust print head and vertical motion tooling table that drops to have an operator unload a product, helping increase production speeds on even the most difficult parts.

“This heavy duty machine can print images up to 17 by 12 inches,” informs Mike Bissel, VP and an equipment expert at ICN. “The M15 is a highly productive and cost-effective machine and, I believe, one of the most flexible flatbed screen printers available on the market today.”
