

**PromoJET – Direct-to-Part Inkjet System
from Inkcups Now Corporation**

The PromoJET Inkjet System is an extremely versatile decorating machine for flat or 3-dimensional items up to 5 inches high. It is ideal for any graphic printed on a light colored or white substrate and offers incredible benefits when running four-color process, gradients or multi-color printing jobs. With the PromoJET inkjet system, just print the digital file to the inkjet – and within minutes your products are decorated with crisp graphics.

PromoJET features an 8 color ink jet head with specialized solvent based inks that are formulated to adhere to most plastics, coated metals, leathers and many more substrates without pre-treatment. More difficult materials can achieve excellent adhesion with the use of a pre-spray. The system has a DC driven tooling table (11" x 18"), onto which parts can be tooled into a multiple-up configuration. Specialized RIP software controls the color reproduction and the overall amount of ink laid on the product.
