

MAGICOAT

MagiCoat by Inkcups is the all new primer for glassware including wine glasses, barware, mixing glasses, beer bottles and much more! After mixing parts A, B and C, this new water-based glass primer is sprayed onto glass items right after flame treatment. Flame treating breaks the molecular chain of a substrate while MagiCoat acts as an additional anchor for the inkjet ink to better adhere to. This pair enables a glass item to withstand up to 200 residential washes and up to 600 industrial washes.

Have other adhesion requirements such as crosshatch, transit and ice bucket testing? After proper use, MagiCoat can pass a number of standard testing methods. Additionally, this three-part method is FDA 21 CFR 175.300, CPSIA and California Prop 65 compliant.

FEATURES

PROMOTES EXCELLENT ADHESION TO GLASS

UP TO 200* RESIDENTIAL WASHES

UP TO 600* INDUSTRIAL WASHES

FDA, CPSIA AND CALIFORNIA PROP 65 COMPLIANT

WITHSTANDS A NUMBER OF ADHESION TESTS

COMMON APPLICATIONS:

- Mixing glasses
- Barware
- Wine glasses
- Spirit bottles
- Beer bottles

*Glass MUST be flame-treated prior to use of MagiCoat. Wash testing could be more (or less) depending on type of glassware used, detergent and temperature of wash.
