

SAPPHIRE SI SERIES

SILICONE INK

The Sapphire SI Series silicone ink from Inkcups Now was developed for one use and one use only: **to print on silicone.** The SI Series ink will adhere to any silicone products. No need to coat with a special spray or epoxy. Simply mix, print and cure. Once fully cured at 200-250°F for 6-8 minutes, the ink will have a high resistance to abrasion and heat that silicone products are commonly exposed to. SI Series ink also has great flexibility and will not crack when bent or stretched.

The SI Series ink is a 2-component ink ideal for printing on phone/tablet cases, wristbands, oven mitts, swim caps, remote control buttons and much more! Custom color matches are available upon request!
